

# Pham Duc Thang

Nodejs Developer

**Date of birth:** 28/03/2000

**Gender:** Male

**Phone:** 0355827535

**Email:** [phamthangpdt@gmail.com](mailto:phamthangpdt@gmail.com)

**Address:** Cau Giay, Ha Noi

## Experience

---

Development experience : 3 years.

Business Domains : Financial, Currency, E-commerce, Business, etc.

Self PR :

- 3 years of experience working as a development experience.
- Experienced with REST API design and services, k8s.
- Have a product mindset.
- Experience in software engineering, algorithms and problem solving.
- Experience work with relational DBs and NoSQL databases (MongoDB), Elastic search.
- Sociable with good teamwork ability.
- Ability to self-study and research new technology.

## Technical skill

---

|                       |   |
|-----------------------|---|
| Programing Languages: | Javascript, Typescript.   |
| Frameworks            | Expressjs, Nestjs, Kubernetes, Message broker(redis, rabbitMQ,... ),... |
| Source Control        | Github, gitlab.   |
| Database              | PostgreSQL, MySQL, mongoDB, redis, elastic search,...                   |

## Education

---

|                 |                        |
|-----------------|------------------------|
| University      | FPT POLYTECHNIC        |
| Major           | Information technology |
| Graduation Year | 2018-2021              |

## Certification

---

|                    |               |
|--------------------|---------------|
| 06/2022 - Percent: | Novus Fintech |
| 08/2020 - 03/2022: | Teracom JSC   |

## Highlight Project

---

|                   |                     |   |
|-------------------|---------------------|---|
| 08/2022 – Percent | Project             | POTL  |
|                   | Project Description | Applications get seamless access to the stock markets, real-time market data, live charts and research. Our intuitive, user-friendly platform gives you the power to trade across multiple assets.  |
|                   | Business            | Financial   |
|                   | Responsibility      | <ul style="list-style-type: none"><li>• Analyze the customers' requirements.</li><li>• Research new technologies to improve features.</li><li>• Provide solutions and detailed designs.</li><li>• Implement and develop new features.</li><li>• Code &amp; debug.</li></ul> |
|                   | Technology used     | Nodejs, Express, Microservice, Mysql, Elastich Seacrh, kubernetes, Kibana, Grafana, Redis   |

|                   |                     |  |
|-------------------|---------------------|--|
|                   | Acquired Skills     | Knowledge of Restful API, API gateway, Microservice, Build monitoring service.   |
|                   | Team Size           | 10   |
|                   | Role                | Backend.   |
| 06/2022 – Percent | Project             | EQUIX  |
|                   | Project Description | Equix is a mobile stock trading app, for Australian Stock Market (ASX & Chi-X). Equix is focussed on simplicity, aiming to have actions can be finished within 3 touches.  |
|                   | Business            | Financial  |
|                   | Responsibility      | <ul style="list-style-type: none"> <li>Analyze the customers' requirements.</li> <li>Optimize some existing features of current systems.</li> <li>Provide solutions and detailed design.</li> <li>Coordinate teamwork to complete the work accordingly.</li> </ul> |
|                   | Technology used     | Nodejs, Express, Microservice, Mysql, Elastich Seacrh, Kubernetes, Kibana, Grafana, Redis...   |
|                   | Acquired Skills     | Knowledge of Restful API, API gateway, Microservice, Build monitoring service.   |
|                   | Team Size           | 10   |
|                   | Role                | Backend  |
| 12/2021 – 06/2022 | Project             | EFinance   |
|                   | Project Description | Application offers cash loan products  |
|                   | Business            | Fintech  |
|                   | Responsibility      | <ul style="list-style-type: none"> <li>Analyze the customers' requirements.</li> <li>Write a document project as required.</li> <li>Provide solutions and detailed design.</li> <li>Implement.</li> <li>Code &amp; debug.</li> </ul>                               |
|                   | Technology used     | Nodejs, Express, Microservice, PostgreSQL.   |
|                   | Acquired Skills     | Knowledge of Restful API, Microservice.  |
|                   | Team Size           | 10   |
|                   | Role                | Backend  |
| 04/2021 – 8/2021  | Project             | Sale app   |
|                   | Project Description | Customer information registration application for Sales of loan products, supporting customer information management functions.  |
|                   | Business            | Fintech  |
|                   | Responsibility      | <ul style="list-style-type: none"> <li>Analyze the customers' requirements.</li> <li>Write a document project as required.</li> <li>Provide solutions and detailed design.</li> <li>Implement.</li> <li>Code &amp; debug.</li> </ul>                               |
|                   | Technology used     | Nodejs, Express, Microservice, PostgreSQL.   |
|                   | Acquired Skills     | Knowledge of Restful API, Microservice.  |
|                   | Team Size           | 10   |
|                   | Role                | Backend  |
