

# Pham Duc Thang

Highly skilled and motivated Backend Engineer with a focus on Node.js, dedicated to designing and implementing robust server-side solutions for web applications

## Relevant Experience

Backend Engineer, **Novus Fintech** May 2022 — Present

- Join the company's project development team.
- Work under the assignment of Team Leader/Project Manager, coordinate between teams to develop.
- Participate in code review, support other members
- Analyze project requirements, plan product development.
- Deploy micro-services/components/APIs.
- Improve system performance.

Backend Engineer, **Teracom** August 2020 — May 2022

- Follow the design and development guidelines and standards set by the teams.
- Ensure high-quality code by writing clean, maintainable, and well-documented code for the front and back sides.
- Test and debug the code and ensure its functionality and performance. It's about quality delivery, not fast.

## Selected Projects

**EQUIX** May 2022 — Present

- Equix is a mobile stock trading app, for Australian Stock Market (ASX & Chi-X). Equix is focussed on simplicity, aiming to have actions can be finished within 3 touches.
- Technology used  
Nodejs, Microservice, Mysql, Elasticsearch, Kubernetes.
- My responsibility  
Coordinate team work to completed work and implement and develop new features.

**MAGPIE** May 2022 — Dec 2022

- Magpie Invest, a global stock trading APP developed and officially launched on September 15, 2021, connecting 5 major markets around the world, including Hong Kong, the United States, the United Kingdom, France and Germany. Investors can trade for more than 18 hours a day, opening up more new global investment opportunities, while diversifying their investment portfolio and currency risks.
- Technology used  
Nodejs, Microservice, Mysql, Elasticsearch, Kubernetes.
- My responsibility  
Analyze the new customers' requirements and improve, maintain and update new features.

**E Finance** June 2021 — May 2022

- Easy Credit provides unsecured consumer loans, quick and easy disbursement. Apply for a quick loan, receive money in 24 hours
- Technology used  
Nodejs, Microservice, Mysql, Elasticsearch, Kubernetes.
- My responsibility  
Participating in the whole process: understanding requirements, analysis, design, development and implementation of the system.
